

# ENGINE PERFORMANCE

## MEG520 ENGINE PERFORMANCE PROGRAM

Today's engines have sophisticated microprocessor based algorithms that controls engine performance. Because of these technological changes, the automotive technician must understand each subsystem's unique role in operation as well as its interdependence with other components. Megatech's 520 programs are designed to give practical troubleshooting experience with domestic and foreign car manufacturer's engines.

With the Variable Fault Feature, the instructor can use the switches to demonstrate the loss of circuits while the engine is running. In doing so, the cause and effect on engine performance can readily be demonstrated.

- Portable with removable casters
- Complete Instrumentation
- Available with dyno
- Most Engines available
- Different Configurations
- Variable fault fully running engine
- Gasoline and diesel available
