

ENGINE PERFORMANCE

MEG550G OBDII FUEL INJECTION TRAINER

DESCRIPTION:

Today Engine is a combination of mechanical, electrical, and electronic sub-systems that depend on precisely controlled fuel injection and ignition timing. This trainer covers the most common problems, such as: fuel pressure, amount of fuel and spray patterns, wiring harness/electrical problems, injector failure/poor resistance, and diagnostics. All units include full ignition.

These units are fully functional wet injection trainers based on OBDII systems. Our unique trainers included operational sensors that make the student use hands-on skills to actuate the product, NOT simulate. There is an array of pin outs for non-invasive measurements.

AVAILABLE IN:

- GM
- Ford
- Chrysler
- Toyota
- TBI
- See our diesel versions as well.
