

MEGATECH INTERACTIVE TRAINING SOFTWARE (M.I.T)

Questions

The built in questions (over 1500 across eight units) are an ideal way to prepare for ASE certification and check learning. The really innovative feature is that every single question is linked to the learning material. After a student has carried out a test, any incorrectly answered questions appear on a review screen. As well as stating the correct answer as part of the review, a link button takes the student directly to the part of the learning material that they need to study further. This is an ideal way to focus revision and learning exactly where it is needed.

Worksheets

Over 300 worksheets that are all referenced to the ASE tasks are available across the eight units. These can be accessed from the main menu or the worksheet button, which activates at an appropriate point in the practical learning modules.

Assignments

There are a number of “short answer” assignments built into the program. These are ideal for students to complete as homework study or revision. Just click the Assignment button on the program and print off as required.

Glossary

A very comprehensive glossary is integrated and can be accessed by clicking the “G” button at any time, or by following a word link in the glossary list window. These words are appropriate to the current screen to help the understanding of new terminology.

Activities

There are several types of activities built into the Student program. The most common require the students to complete missing words, type in the answer to a short question or to drag a picture of a component, for example, to match its name.

Toolbox

The Toolbox option simply shows a window that lists a number of Snap-on tools. Clicking on the name shows a picture.
