

ELECTRICAL/ELECTRONIC SYSTEMS

GM SET (SPECIALIZED ELECTRONICS TRAINING) MEG GMSET

DESCRIPTION:

This program is the GM Specialized Electronics training course as presented in Stage 1, 2, and 3 of the General Motors curriculum. The trainer includes all three stages along with a unique console design. The power distribution incorporates separate tip jacks for DC, AC, and fixed 5 and 12VDC power. All the component carriers have machined radius edges and thermal black silkscreen which shows not only the schematic symbol of the component, but the activity and figure number of the circuit. The base console is 3/16" Acrylic plastic mounted in a slanted wood stand for desk or tabletop use. Hinged top for storage of modules and leads. Plastic has 135 milled holes for inserting individual modules during training.

TOYOTA ELECTRICAL PROGRAM MEG622T

This is the same kit used at Toyota's T-TEN programs for their technical 622 course.

- Includes power supply
- All jumpers
- Toyota parts
- White acrylic carriers
- Schematic silk screened
- Includes manual
