

# BRAKES

## 4 WHEEL BRAKE SYSTEM TRAINER

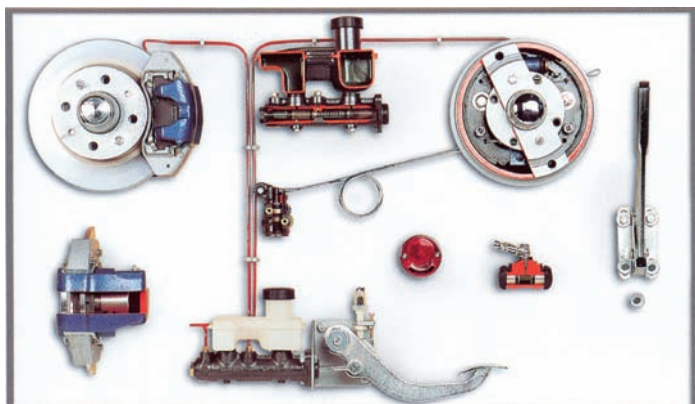

### DESCRIPTION:

This automotive brake trainer encompasses all 4 different disk brake systems found on modern automobiles. Includes front disk brakes from both a RWD vehicle and a FWD vehicle. The rear disk brakes both represent different styles with a screw piston parking brake system, and rear disk brake with drum in disk parking brake setup. The trainer is now able to allow additional NATEF competencies and cover a wider range of vehicles students will see in the field. The MEG-680PB-4W features a dash panel unit with parking brake light, pressure warning light, and a standard brake light. It also includes an ignition switch, and 4 pressure gauges for each separate wheel. Two of the ABS sensors are harnessed out to terminal strips so a student gets a basic understanding of the signal generated from them.

- Solid steel caster mounted frame
- 4 hydraulic pressure gauges
- Power boost with vacuum pump
- GM and Ford brake components
- Ratcheting emergency brake pedal system
- Standard brake pedal setup with brake switch
- Requires 12 VDC

## MEGART 1205 DUAL BRAKE CUTAWAY

- Self Standing
- Cutaway and working system
- Beautifully painted
- Fully sectioned
