

BRAKES

4 WHEEL ABS TRAINER MEGABS4

DESCRIPTION:

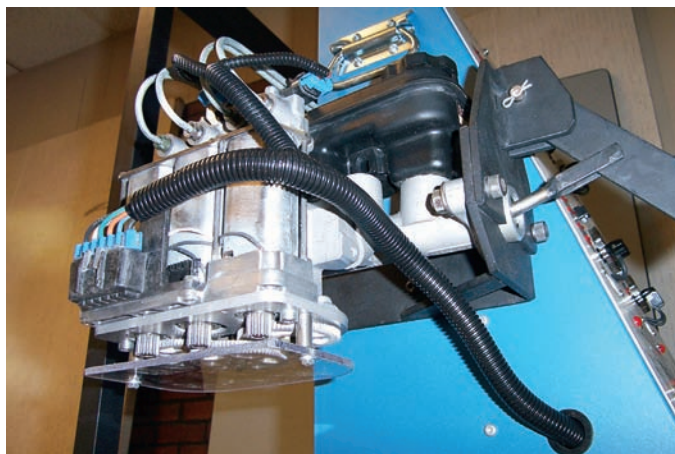

Megatech's ABS training system incorporates live components and hydraulic lines, and is a self-contained fully working braking system manufactured with authentic, automotive components. The Delphi Chassis VI provides a full array of pressure gauges that show front and rear line pressures and the individual pressure at each wheel. It is a unique hands-on trainer with diagnostics.

The system contains an individual potentiometer for each wheel speed sensor. The wheel speed is manually reduced causing actuation of the system. It also contains a push-button component to recreate wheel noise, i.e. a bad bearing.

The unit is configured as a self-standing metal chassis that can work on a bench or table. It has an AC power connect and requires 12VDC. Two lock out handles are mounted on the sides for easy portability and storage. It includes a full student manual and all relevant technical service information.

INCLUDES:

- DELPHI Chassis VI
- Full ABS Function
- Brake Pedal and Master Cylinder
- BCM and PCM included
- Visible gears and actuation
- Complete Curriculum
- ATC lamp
- Fault insertion
- Requires 12VDC Battery

Full actuation
