

TRUCK / HEAVY DIESEL

HEAVY DUTY STARTING & CHARGING TRAINER: MEG690

DESCRIPTION:

The trainer is designed to incorporate live actual components, providing “real world” electrical measurement values. This is the exact unit as designed for Mack Truck and used in their North American satellite training centers. Diesel engine starters operate at high values, a custom designed friction load, brakes the starter and creates a realistic condition with actual current draw. It uses AC Delco’s Heavy Duty Charging and Cranking textbook as the instructional material.

THE SYSTEM UTILIZES:

- Welded tube frame construction
- Heavy duty starter
- Heavy duty alternator
- 5 HP motor
- Variable friction load device
- Master disconnect switch
- Lexan protection guards
- Fully wired with OEM cables and overcrank protection
- Operational manual
- Delco heavy duty starting and charging work-book
