MEG-WI1 Wind Power Trainer

Megatech's Wind Power Generator removes the variable weather conditions by having a built-in wind power source. The trainer has wind speed measurements and DC meters showing voltage and current. There are several outputs and load adjustments making the electricity generated easy to use and test by the student.

The power source and wind mill are protected by a cover, and the full trainer recreates all of the necessary inputs to understand wind as a viable and renewable energy.
