

THE MEGATECH MISSION

Megatech's involvement with the energy industry dates back to 1970. For over 34 years, Megatech has conducted R&D, developed oil-less, multi-fueled engines, electric dynamometers, training programs for all 8 areas of ASE certifications, including Hybrid vehicles, and for the last five years a renewed emphasis on alternative energy program training aids. In 1978, Megatech was the FIRST Company to produce a full line of alternative energy modules and kits for the education market. Since then we have obtained over 6 patents and copyrighted over 70 manuals. We have successfully delivered product to 30 plus countries, 4,000 public and private school, U.S. Military training centers, auto industry training facilities for GM, Saab, Ford, American Honda, KIA, Subaru, BMW, Mack Trucks, and others.

Just look at our history and customers. We listen to them, provide technical solutions, design new trainers, manufacture, install, and train instructors. this is why schools like the College of Southern Nevada, WyoTech, UTI, Lincoln Tech and NADC have adopted our electrical programs for their core curriculum. Yet, this is not where we end... We go back to our customers, ask questions that integrate our services into their programs. We are a big family with human touch and still growing worldwide.

We thank our customers who have been with us during the past decades and look forward to servicing you for the foreseeable future.

Best Regards,

Varant Basmajian, President
Megatech Corporation
